

Most health systems know patients are leaving their network. The challenge is knowing where they're going, why they're leaving, and having the data to act.

Growth starts with accurate provider data.

Candor Health's AI-native platform is the provider data intelligence layer behind patient retention, network growth, and the find-a-doctor experience your members actually expect.

Powered by purpose-built provider data agents, Candor Health processes 120,000+ sources and 4 billion claims monthly, turning fragmented inputs into continuous intelligence health systems can act on.

Three views our solution can deliver:

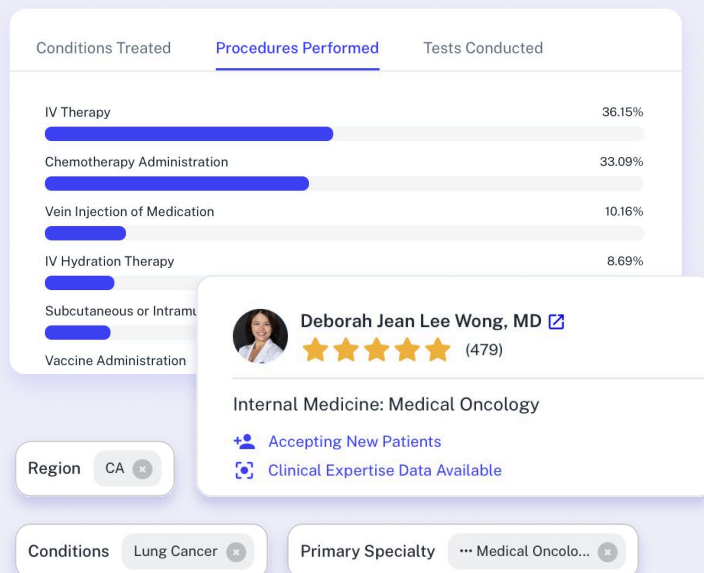

-  **Find-a-Doctor Intelligence**
AI search that matches patients to the right provider: by condition, procedure, and clinical expertise.
-  **Referral Analytics**
See where patients go and why they leave. Analyze referral patterns and detect out-of-network leakage before it becomes a revenue problem.
-  **Strategic Growth Insights**
Acquisition targets, recruitment intelligence, and expansion opportunities backed by ownership and affiliation data.

THE PROOF IS IN THE DATA

7M+
Providers

1M+

Match. Keep. Grow.

AI-powered care navigation, referral visibility, and growth intelligence in one platform.

Built for the teams driving growth and retention

-  **Network Operations**
Real-time visibility into provider movement, affiliations, and availability.
-  **Revenue Cycle & Strategy**
See where patients leave. Find your next acquisition and recruitment targets.
-  **Patient & Digital Experience**
The find-a-doctor experience your patients expect, matched by what they actually need, not just specialty codes.
-  **Provider Experience**
Verified profiles covering expertise, employment history, licenses, and certifications. Faster onboarding, less duplicative outreach.
